

**ABSTRACT OF THE DISCLOSURE**

A storage unit with a rolling tray arrangement for heavy loads includes a housing with an opening in at least one of the sides, the opening being substantially rectangular in shape, a lower portion of the storage unit provided with a plurality of rollers, a detachable roller shelf provided with a plurality of rollers capable of being attached to the storage unit and extending out from a lower edge of the opening, a tray for carrying items to be stored in the storage unit, the tray being movable over the rollers of the storage unit, out through the opening, and onto the roller shelf. In an alternative configuration, a plurality of rollers arranged along lengths of projections on the lower portion of the storage unit, and hold-down brackets are provided and fixed to sides of the tray to hold the tray in a cantilevered position when the tray extends outside of the storage unit.
